Common Questions

from the 2014 June Paper 2 and Their Solutions

Question 1: Solving Quadratic Equations

Question: Solve $(2x^2 - 5x - 3 = 0)$.

Mark scheme highlights: Apply quadratic formula: $(x = \frac{-b \pm \sqrt{b^2 - 4ac}}{2a})$. Calculate discriminant: $(\Delta = (-5)^2 - 4 \times 2 \times (-3) = 25 + 24 = 49)$. Compute roots: $(x = \frac{5 \pm \sqrt{49}}{4} = \frac{5 \pm 7}{4})$. Final answers: $(x = \frac{5+7}{4} = 3)$ and $(x = \frac{5-7}{4} = -\frac{1}{2})$.

Key Learning Point: Correct application of the quadratic formula and accurate calculation of the discriminant are vital for full marks.

Question 2: Calculating the Area of a Triangle

Question: Find the area of a triangle with sides 7 cm, 24 cm, and 25 cm.

Mark scheme approach: Use Heron's formula: $(\text{Area} = \sqrt{s(s-a)(s-b)(s-c)})$, where (s) is the semi-perimeter. Calculate semi-perimeter: $(s = \frac{7 + 24 + 25}{2} = 28)$. Compute: $(\sqrt{28(28-7)(28-24)(28-25)} = \sqrt{28 \times 21 \times 4 \times 3})$. Simplify: $(\sqrt{28 \times 21 \times 4 \times 3} = \sqrt{28 \times 21 \times 12})$. Calculate the value under the root: $(28 \times 21 = 588)$, then $(588 \times 12 = 7056)$. Final area: $(\sqrt{7056} \approx 84)$ cm². Note: Precise calculation and proper application of Heron's formula are crucial for full marks.

Detailed Breakdown of the 2014 Exam Questions and Model Responses

Below, we analyze some of the typical questions from the June 2014 F324 exam, based on the unofficial markscheme, with explanations of what examiners are seeking.

Question 1: Data Representation

Example Question: Explain how an 8-bit binary number can be used to represent decimal numbers from 0 to 255.

Expected Points in Markscheme:

- 8 bits means 2^8 possible combinations
- Range from 0 to 255 (decimal)
- Each binary number corresponds directly to a decimal value
- Use of the term "unsigned binary number"

Sample Student Answer (High-Scoring): "An 8-bit binary number uses 8 bits, each of which can be 0 or 1. Since $2^8 = 256$, the possible values range from 0 (00000000) to 255 (11111111). This allows the binary number to directly represent decimal numbers from 0 to 255 without the need for sign bits."

Marking Points:

- Mention of 8 bits and their capacity ($2^8 = 256$)
- Correct range (0-255)
- Explanation of direct correspondence between binary and decimal
- Use of correct terminology ("unsigned binary number")

- Checking each element (sequential search) or dividing the list (binary search)
- Returning the position or indicating if the number isn't found

Sample Student Answer: "A binary search algorithm can be used by comparing the target number to the middle element of the list. If they are equal, the search ends. If the target is smaller, the search continues in the lower half; if larger, in the upper half. This process repeats until the number is found or the list is exhausted."

Marking Points:

- Recognition of the list being ordered
- Explanation of the binary search process
- Mention of dividing the list
- Return position or indication of absence

What is an Unofficial Mark Scheme? **Definition and Purpose** An unofficial mark scheme is a collaboratively or independently compiled document that attempts to replicate or approximate the official grading criteria used by examiners. Unlike official mark schemes, which are released by examination boards post-assessment, unofficial versions are often created by educators, students, or exam analysts

based on memory, question papers, or available information. The primary purpose of an unofficial mark scheme is to: Provide insights into how examiners might have awarded marks. Help students understand what was expected in their responses. Assist teachers in preparing students for similar questions or future exams. Enable post-exam analysis of question difficulty and grading trends.

Limitations and Reliability While valuable, unofficial mark schemes are inherently speculative and may lack the precision of official documents. They can sometimes overestimate or underestimate grading criteria, leading to potential misinterpretations. Nonetheless, when cross-referenced with actual student performance data and question analyses, they remain useful tools.

Structure of the F324 June 2014 Unofficial Mark Scheme

Overall Format The unofficial mark scheme for the June 2014 F324 exam typically follows a structured format aligned with each question or part-question. It includes:

- Clear identification of question numbers.
- Mark allocations for each part.
- Model answers or key points expected in student responses.
- Breakdown of marks awarded for specific concepts, calculations, or explanations.

This structure enables users to assess how marks are distributed and which parts of answers are most critical.

Common Sections Covered The mark scheme usually encompasses:
