Setting Up a Liferay Development Environment Before diving into source code development, establishing a proper environment is crucial. Here are the essential steps:

2.1 Prerequisites

Java Development Kit (JDK): Liferay 7.x supports Java 8 or higher. **Database:** MySQL, PostgreSQL, or other supported databases. **Build Tools:** Maven or Gradle, depending on project configuration. **Integrated Development Environment (IDE):** Eclipse, IntelliJ IDEA, or Visual Studio Code. **Liferay Bundle:** Official Liferay bundles are pre-configured packages with server and portal installed.

2.2 Installing Liferay Bundle

Download the latest Liferay bundle from the official website, such as: Liferay DXP (Commercial) Liferay Community Edition (CE) Extract the bundle and run the server: `bashcd liferay-ce-./gradlew clean deploy` or for Windows: `cmdgradlew.bat clean deploy` Once the server is running, access the portal via `http://localhost:8080` and proceed with customization.

Creating a Liferay Project with Source Code

Developing custom functionalities involves creating portlets, themes, hooks, or modules. This section focuses on building a modular portlet project, which is the most common extension point.

2.1 Using Liferay Workspace

The recommended approach is to create a Liferay Workspace, a development environment that manages multiple modules.

Steps:

Create a Workspace: Using Liferay Blade CLI: `bashblade create -t theme -p com.example.mytheme my-theme` Or, create a workspace: `bashblade init my-liferay-workspace`

Add a Module (Portlet): `bashcd my-liferay-workspaceblade create -t portlet -p com.example.myportlet my-portlet` This creates a structured project with predefined configurations, making it easier to develop, deploy, and maintain.

2.2 Understanding the Source Code Structure

A typical portlet project contains:

- `src/main/java/`: Java classes, portlet controllers, services.
- `src/main/resources/`: Configuration files, `portlet.xml`, `liferay-portlet.xml`.
- `src/main/webapp/`: JSPs, CSS, JavaScript, images.
- `build.gradle`: Build script with dependencies and build instructions.

2.3 Developing Custom Portlets

Key steps:

Define Portlet Class: `javapackage com.example.myportlet;import com.liferay.portal.kernel.portlet.bridges.mvc.MVCPortlet;import javax.portlet.Portlet;public class MyPortlet extends MVCPortlet { // Override methods or add custom logic }`

Configure `portlet.xml` and `liferay-portlet.xml` to register the portlet.

Create JSP Views for rendering UI.

Add Dependencies: For example, Liferay MVC frameworks, API libraries.

2.4 Deploying the Portlet

Build the project: `bash./gradlew build`

Deploy the resulting `.jar` or `.war` file into the Liferay server: `bash./gradlew deploy`

Access the portal, navigate to the Site Builder, and add the custom portlet to a page.

Best Practices for Liferay Development

Creating a scalable, maintainable Liferay project involves adhering to best practices:

3.1 Modular Design

Utilize Liferay's modular architecture to break down functionalities into manageable modules. Follow OSGi best practices for service registration and dependency management.

3.2 Use of Service Builder

Leverage Liferay Service Builder to generate persistence and service layers, reducing boilerplate code. Define entities in `service.xml`, generate code, and customize as needed.

3.3 Version Control and CI/CD

Maintain source code in repositories like Git. Automate build, testing, and deployment pipelines with Jenkins or GitHub Actions.

3.4 Performance Optimization

Cache data where appropriate. Minimize server calls

and optimize database queries. Use lazy loading for heavy resources.

3.5 Security

Implement proper user permissions. Sanitize inputs. Use HTTPS and secure sessions.

Sample Source Code Snippet: A Basic Portlet

Here's an example of a minimal portlet class:

```

javapackage
com.example.myportlet;import
com.liferay.portal.kernel.portlet.bridges.mvc.MVCPortlet;import
javax.portlet.Portlet;public class HelloWorldPortlet extends MVCPortlet {
// Custom logic can be added here
}

```

And a simple JSP view (`view.jsp`):

```

jsp<%@ taglib uri="http://java.sun.com/portlet"
prefix="portlet" %>Hello LiferayHello, Welcome to Liferay Portlet!

```

This forms the foundation for building more complex portlets with user interactions, data integration, and dynamic content.
