QuestionAnswer

What are the main types of engineering materials used in manufacturing?

The primary types include metals (ferrous and non-ferrous), ceramics, polymers, and composites. Each type has unique properties suitable for specific applications.

How is hardness measured in materials, and what are common hardness testing methods?

Hardness is measured to assess a material's resistance to deformation. Common methods include Brinell, Rockwell, Vickers, and Knoop hardness tests, each suited for different material types and thicknesses.
